

# Insights

(30<sup>th</sup> Jan 2020 to 26<sup>h</sup> June 2021)

- As of 26<sup>th</sup> June 2021, percentage of Recovered cases across India seems to be above 90%, few states even have above 95%. But states like Sikkim, Manipur, Nagaland have below 90% cases recovered. Mizoram has only 77% recovery.
- As of 26<sup>th</sup> June 2021, percentage of Active cases is less in central and west India - under 1%. Few Northern and Southern states have around 1-3%. Eastern states have higher percentage of Active cases. 12% in Mizoram followed by 8% in Sikkim are the top two states having higher active cases.
- Percentage of deceased cases is around 0.5% to 1.5% for most of the states, Punjab has the highest percentage of deceased cases- 2.5% followed by Uttarakhand and Maharashtra having around 2% of cases resulting in death.
- Active to recovered ratio - Lesser the ratio better the state. With active to recovered ratio we see west and central India is doing better cause of lesser active to recovered ratio. Again Sikkim, Mizoram, Nagaland are having higher active to recovered ratio.
- Recovered to death ratio – Greater the ratio better the state. Daman and Diu leads followed by Odisha, Kerala. Eastern states are doing better in this category which means there is not much

deceased cases just that they have more active cases with less recovery rate.

Government and other healthcare agencies should look in and help Sikkim, Mizoram, Nagaland to treat covid cases and improve their recovery rate.

- If we take a look at the state vs date dashboard in the states story, we see for Punjab the deceased percentage is on a slightly increasing curve and it is the same for few other states.
- As for India over all things are getting better as of 26<sup>th</sup> June 2021, the active % dropping and recovered % is peaking.

As far vaccination is concerned Maharashtra leads in total dose administered and total individuals administered. But only 24% of Maharashtra is vaccinated. Tamil Nadu, Uttar Pradesh with under 20% of the population vaccinated.

The Government should check whether the vaccines are distributed to states population wise, if that is already done, government should keep promoting and encouraging people who are eligible to get vaccinated.

The fight is not over, take precautions, be careful and stay safe
